As a future educator it is important to have some ideas on what you want to teach the children that will be in your classes. In this time I feel it is important that students be able to use computer-based technology efficiently. It is almost impossible not to be able to have some knowledge of the different computer technologies that are used in our society.

It is important that students be able to use computers as resources for learning. There are many different programs that can be used to help students with many different needs and with practically ever subject. Students are being taught how to use computers to some extent as early as kindergarten, and progress each year. With the way things are changing in technology, teachers have almost no choice but to expose their students to computer use.

When I am in the classroom I hope to expose my students to technology by reviewing some of the things they have learned in the past and by exposing them to new uses. By letting the students create projects and presentations they will be exposed to new programs that they will need in the future. I also hope to expose them to resources on the internet that can help them in the classroom. There are many resources for them to find reliable information for projects and help in their subjects. With computer use it is also possible for students to communicate with students in other parts of the world and be exposed to different cultures.

During the course of the school year, I hope that my students will be able to use the computers at a higher level than before they came into my class in the beginning of the year. I hope that they will be able to use computers to help research and present projects that they may have as well as use them for help in their everyday subjects.
