Mentoring Project

The mentoring project involved working with students at Model Laboratory School’s After School Program. I visited and talked with students ranging from preschool through fifth grade. The project occurred from October 12, 2001 through November 29, 2001 for a total of 16.5 hours. I helped some students work on the alphabet and writing. This project helped me to realize that children are very different and learn at various levels. Some of the students enjoy being at school, and most of them are very active, especially the younger children. Observing and working with the younger students has helped me to appreciate the importance of keeping the children under control, and I have also been reminded of the significance of being sure that all of the children are kept in sight. This project was an excellent experience that I believe was also very valuable. I enjoyed working with the students, especially the kindergarteners.
